Interzoic Language Skin Object
version 1.1.0

Introduction

The Interzoic Language Skin Object application installs in a DotNetNuke (DNN) portal framework and provides language selection controls. It has the same configuration options and functionality of the core DNN Language Skin Object. In addition, it provides an option to remove the <country/region> information from all HTML presentations by using a new attribute: **ShowCountry**.

Attribute Name	Functionality	Allowed Valued	Default Value
ShowCountry	Boolean attribute, used to either display or hide the <country/region> information	True, False	True

When **ShowCountry** attribute is specified as False the <country/region> information is removed from the text rendered for the following tokens. This affects mouse over tool tips, drop down menus and link text.

- [CULTURE:NAME]
- [CULTURE:DISPLAYNAME]
- [CULTURE:ENGLISHNAME]
- [CULTURE:NATIVENAME]
- [LABEL]

ShowCountry=True (DNN Default)

ShowCountry=False

Requirements and Resources

- DotNetNuke Version 5.6 or higher
- DNN Language Skin Object Explained

Installation

1. Install the Interzoic.Language.zip package using the install extension wizard
2. Registrar the tag in the skin.ascx file:

```
<%@ Register TagPrefix="izm" TagName="LANGUAGE" Src="~/DesktopModules/Interzoic.Language/Language.ascx" %>
```

3. Add the izm:LANGUAGE skin tag to the skin.ascx file as shown below.

Examples

Note: all examples have ShowCountry="False". If ShowCountry="True" or omitted, then the Display would be the same as the default DNN Language Skin Object as demonstrated in the DNN Language Skin Object Explained article link above.

Display	Code (ascx)	Description
English	`<izm:LANGUAGE runat="server" ID="izmLANGUAGE" ShowMenu="False" ShowLinks="True" ShowCountry="False" />`	Flags with mouse over tool tip.
English ▼	`<izm:LANGUAGE runat="server" ID="izmLANGUAGE" ShowLinks="False" ShowMenu="True" ShowCountry="False" />`	Dropdown List
English ▼	`<izm:LANGUAGE runat="server" ID="izmLANGUAGE" ShowLinks="False" ShowMenu="True" ShowCountry="False" CommonFooterTemplate=' <img src="[I][FLAGSRC]" alt="[CULTURE:NATIVENAME]" border="0" />' />`	Dropdown List and Flag of currently selected language
en de es fr	`<izm:LANGUAGE runat="server" ID="izmLANGUAGE" ShowLinks="True" ShowMenu="False" ShowCountry="False" ItemTemplate='<a href="[URL]" class="Language" title="[CULTURE:NATIVENAME]"><span class="Language[SELECTED]">[CULTURE:NAME]</span></a>'/>`	Language Links. Selected language uses unique class name.
